What is R?

**R is a language and
environment for statistical
computing and graphics.**

<http://www.r-project.org/>

Who uses R?

Spreadsheet Users

Programmers

Statisticians

Data Scientists

R and Related Software

By a significant margin, more respondents used **SQL** than any other tool (71% of respondents, compared to 43% for the next highest ranked tool, **R**).

— O'Reilly 2013 Data Science Salary Survey

R and Related Software

...open source tools (R, Python, Hadoop frameworks, and several scalable machine learning tools)...

— O'Reilly 2013 Data Science Salary Survey

R and Related Software

It seems very likely that knowing how to use tools such as **R, Python, Hadoop frameworks, D3**, and scalable machine learning tools qualifies an analyst for more highly paid positions.

Programming with Data

Programming with Data

S is a programming language and environment for all kinds of computing involving data.

— John M. Chambers

Programming with Data

S specializes in *computing with data*:
any application with interesting
requirements for organizing
analyzing or presenting data is a
candidate.

— John M. Chambers

Organizing, Analyzing & Presenting Data

Organize

Data in R

Data is Collective

Data Structures

Data Types

Data is Collective

Data ... occurs in two constructions:
as a plural noun.... and as an
abstract mass noun (like
information) .

— <http://www.merriam-webster.com/dictionary/data>
